

rev•e•la•tion (rĕv'ə-lā'shən)

noun

1. The act of revealing or disclosing.
2. Something revealed, especially a dramatic disclosure of something not previously known or realized.

Revelation™ is RVM's litigation support and data processing platform. It has been built with one thing in mind – customer satisfaction. Revelation's developers and technicians succeed, where other vendors, that rely on off-the-shelf solutions fail. RVM succeeds by being able to adapt and process challenging items when other solutions would generate an exception. This ensures that the RVM processes a more complete data set.

At the end of the day, RVM knows that clients are simply looking for their data to be delivered accurately, completely, and on time – every time.

Revelation™ Highlights:

- Grid architecture provides massive scalability
- Powered by Microsoft® technologies including SQL Server 2005, C# and .NET
- Court tested, verifiable chain of custody
- Superb imaging layer
 - Processing is done in native application to maintain original appearance
- Superior handling of Lotus Domino data
 - Extraction of all metadata including custom and hidden fields
 - Processing of all Domino databases, not just email databases
 - Maintains the Notes Unique ID, no conversion required
 - Discovers location of document in all views and folders
 - Full extraction of embedded images, and objects (*.xls, *.ppt, etc)
- Support of EDRM.net XML standard for e-discovery
- Seamless integration with RVM's project management software, STARS™

Data Extraction / Data Processing

- Ability to recognize and extract over 185 different files types
- Advanced processing of Microsoft Outlook PST Files, Microsoft Office Documents, Lotus Notes Database Files, and Novel Groupwise email
- Full document header identification to ensure files are named with proper extensions
- Extraction of Lotus Notes documents while maintaining Notes unique identifier.
- Extraction of embedded items
- Full text indexing of all extracted content
- Preservation of metadata from original source

Production

- Conversion to various output formats, TIFF, PDF, and paper
- Printing of protected documents (most), and Lotus Notes Documents with “prevent copying enabled”
- Pristine formatting/imaging of MS-Office documents with specific attention to MS-Excel, and technical formats such as AutoCAD
- Delivery available in Native File Format of responsive (E-documents, PST, NSF, MSG)
- Creation of Load Files, .lfp, opticon, etc
- Full support for Concordance, CT Summation, etc

Filtering / Search

- De-duplication utilizing MD5-Hash Algorithm featuring preservation of parent-child document relationships
- Specification of range of de-duplication across project, custodian, and collection

- Accurate date filtering utilizing using various metadata fields
- Search both metadata and the full text of over 185 different document types including; Microsoft Office Suite, Microsoft Outlook email, Lotus Notes email, text, html, etc...
- Searching by: phrase, boolean, proximity, directed proximity, phonic, stemming, numeric, wildcard, fuzzy, and conceptual

Reporting

- File extension reports contain a listing of all file types and their quantities, within a given data set
- Exception reports provide a list of all files that were not processed and the reason for their failure

Online Review

- Variety of hosting packages available to match specific review requirements
- Native file or image based review
- Transfer data from extraction to review within a secure data center
- Redundant 100 Mb / sec connectivity provides instantaneous access
